

# Release Notes - April 27, 2020

## New features

- Sub-lines on Order lines for more container level detail tracking. Adds ability to invoice multiple WPC on a single profile.
- Invoice detail added to invoice when using sub-lines feature
- In the set up tools you can set default to use 3 decimal places for use within the system (ex. Fuel Surcharge \$0.165)
- System version number and release notes can now be found at the bottom of the main page
- Certification Approval and Required Fields Set Up - added to set up tools so ESC can control fields on the profile that should be required or decertify the profile.
- Calendar Integration w/ Outlook and Google for Schedules Module

## Fixes

- Misc. Bug Fixes
- Corrected the date picker on regulatory page of profile
- Fixed the delete invoice issue where the delete yes box did not go away
- Corrected the issue where the 2nd driver was not printing
- Fixed the display of the logo in the top right from being distorted

## Improvements

- Report: Generator Profile Summary w/ Pricing & Cost - Added additional columns
- Report: 10-day Report - enhanced PDF feature from this report
- Report: Generator Profile Report - Corrected missing info
- Added Approval# column to schedules tab for bulk containers
- Enhanced the loading speed in the accounting module to eliminate spooling
- WLQ Fillable PDF in Documents Official Forms so that if generator completes the form you can choose +Profile from PDF in the profile tab and the system will scrape the PDF and upload information into the system.
- State waste codes within a profile now recognize the generator site and the disposal site to display the correct state waste codes boxes on the profile.
- Disposal Facility - Added a box for Common Name and Parent for each disposal facility
