

Release Notes - June 15, 2020

Fixes

- Misc. Bug Fixes

Improvements

- New Login Page (Ctrl + F5 to clear cache & load page correctly)
- Disposal Facilities & Waste Product Codes no longer have to be duplicated when entering an Exempt profile. All exempt information can be added to the default codes in WLQ, rather than creating a new set.
- ESC's can now exempt their own profiles. Just click the exempt box and update as needed. Do not submit these to network.
- Bill by each (ex. Billing for each bulb in box) – Update the piece count on the weight/grade tab on the order. On the order detail tab check the Use SL (subline) box for that line item. The total will calculate as per the piece count. **Invoice detail for sublines coming soon*
